Roll on Site 40ft up

We are also able to roll at ground level on site.

Product Profile

Convex Curved Panel

Concave Curved Panel

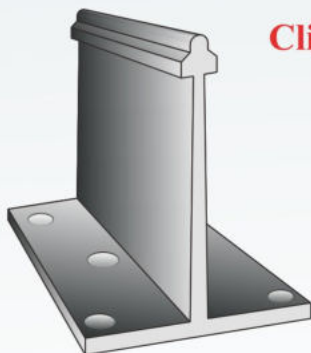

Straight Roof Panel

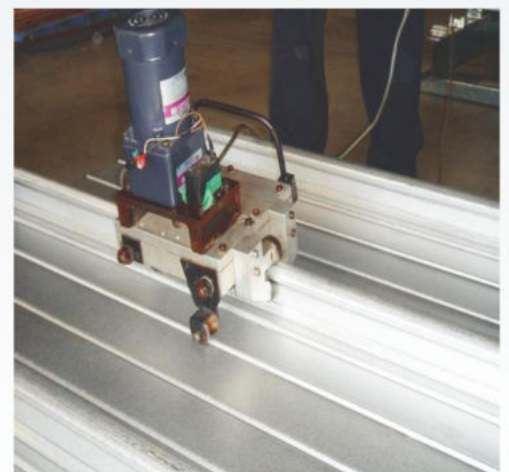

Tapered Roof Panel

Having a rib height of 65mm, allows better manage of water flow during heavy rain. Hence longer roof span is achieved.

Clips System

We use aluminum clips to secure **GEAS ZIP DECK** roofing sheet into place, by using the technology similar to zipping.

Geas Zip Deck

Is designed using a standing seam system, specially catering to the requirements and specifications of various building applications. It is a product that exceeds the satisfaction of contractors, architects and end users alike. The light weight design is most suitable, for buildings that requires to cover a large roof spans.

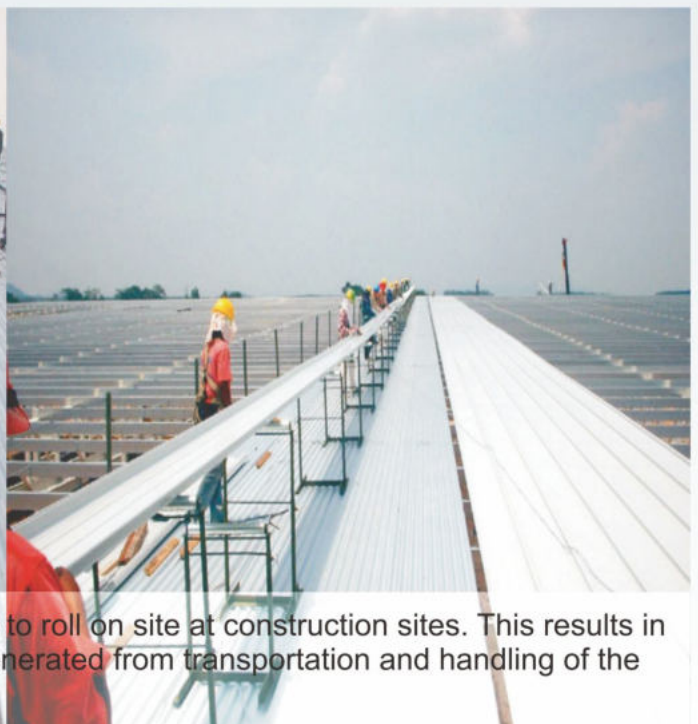

Roll on Site 40ft up

GEAS ZIP DECK is also very mobilize as it allows to roll on site at construction sites. This results in better quality and lower cost due to the savings generated from transportation and handling of the roofing sheets.

Lesser Overlaps

GEAS ZIP DECK is also very mobilize as it allows to roll on site at construction sites. This results in better quality and lower cost due to the savings generated from transportation and handling of the roofing sheets.
